Art Unit: 2652

Claims 1-9 are pending.

### Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 3. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Akiyama et al (US 5,815,342) in view of Fukuichi (JP 02-227814).

Akiyama et al discloses a perpendicular magnetic recording medium 20, as shown in at least FIGs. 1& 2, including at least: a perpendicular magnetic recording layer 23 and a backing layer 22 backing said perpendicular magnetic recording layer, said backing layer having an in-plane magnetization (see col. 7, lines 8-10), characterized in that said backing layer is formed of a ferrimagnetic material having a compensation temperature. Since the specific temperature and/or the material as set forth in the claim, e.g., GdFe alloy, has not been recited in Akiyama et al, it is considered that the "compensation temperature" being within the vicinity of a recording/reproducing temperature in which reproducing of magnetic information is made from said perpendicular magnetic recording layer has not been expressly taught by Akiyama et al.

Art Unit: 2652

Fukuichi, discloses a perpendicular magnetic recording medium including a ferrimagnetic backing layer 2 which is formed of a GdFe alloy, e.g., GdFeCo, which material would provide the aforementioned proper "compensation temperature" (see CONSTITUTION-first 4 lines). From this teaching, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have substituted the CoZrNb backing layer of Akiyama et al with the backing layer formed of GdFeCo, as taught by Fukuichi. The motivation would have been: lacking any unobvious or unexpected results, substituting one well-suited material for another similar material, would have resulted from routine engineering experimentation. Furthermore, as taught by, Fukuichi, a high-density perpendicular recording medium would be generated. Still further, (as per claim 2) wherein the recording/reproducing temperature is -20 to 100 degrees C is considered to encompass a typical recording/reproducing temperature; (as per claim 3) wherein the ferrimagnetic material is any of an alloy of GdFe system, an alloy of DyFe system and a garnet ferrite (as discussed, supra); (as per claim 4) wherein the perpendicular magnetic recording layer is any of a single layer perpendicular magnetic film or a multilayer perpendicular magnetic film, i.e., Akiyama et al at least would encompass the single layer perpendicular magnetic layer configuration.

#### Response to Arguments

- 4. Applicant's arguments filed 1/27/05 have been fully considered but they are not persuasive.
- **A...**Applicant asserts on pages 6-7 that "there is no motivation to combine the references since the backing layer of Fukuichi is magnetized perpendicularly to the base.

Application/Control Number: 10/718,202 Page 4

Art Unit: 2652

This is found unpersuasive. The Examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988) and *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, Fukuichi is utilized to teach a perpendicular recording medium which uses a ferromagnetic material having a compensation temperature, e.g., an alloy of GdFe, such that the magnetic anisotropy is improved. As discussed in the rejection above, Akiyama et al also discloses a perpendicular recording medium, however, does not expressly disclose a backing layer being formed of a ferromagnetic material having a compensation temperature.

It is considered that the teachings of Fukuichi would have been very pertinent to skilled artisans in the perpendicular recording art, such that materials having known favorable magnetic characteristics would have been readily provided for in other perpendicular recording media, as established herein. The combination of references is thus considered proper and is maintained.

## Allowable Subject Matter

5. Claims 5-9 are allowable over the prior art of record. The addition of "temperature changing means for heating or cooling the backing layer" is considered to read over the prior art of record.

Application/Control Number: 10/718,202 Page 5

Art Unit: 2652

#### Conclusion

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Brian E. Miller whose telephone number is (571) 272-7578. The examiner can normally be reached on M-TH 7:15am-4:45pm (and every other friday).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Hoa T. Nguyen can be reached on (571) 272-7579. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
